Over 35 years Framing Experience

Courses are tailored to your requirements
Based on the GCF syllabuses

Fine Art Trade Guild 5 levels of Framing Standards

On Site Training

On site training gives you or your staff the ideal opportunity to be trained at your premises using the equipment that you are familiar with, we are often called in to problem solve or improve work flow but this is only possible by being on site to see things for ourselves and advise you of our findings.

Frame shops or factories evolve over many years and they become set in their old ways, directors or managers ignore staff calls for machine servicing or improving workshop layouts or conditions, in other words as long as the work gets out the door they are happy and not concerned about making things more efficient.

If they take a closer look at the material wastage and labour time taken,

they may have a shock at what is really happening behind those workshop doors.

When it come to saving money improving efficiency and increasing profit (That's when the Boss listens)

Benefits

More cost efficient for the customer when groups are concerned

It clears the air if staff moral or quality issues are becoming a problem

Good team building day

We can assess your machinery condition.

Allows us to hear Staff ideas and brings to light any Equipment or Framing problems.

Training report will follow to conclude our findings

Think Before Applying

If staff keep getting called away to attend to other jobs, the preferred training would be in our training room in Northampton, with your workshop visit handled as a separate issue.

How do you start

Courses are tailored to your requirements, so each enquiry is dealt with as confidential and prepared and priced according to the number of staff being trained / Your Location / Subjects being covered. .

Please return the required form and We will do the rest.
